

Orlando Dominici

Software Engineer/Fullstack Developer (MERN)

SUMMARY

Creative, detail-oriented, software engineer with deep desire to learn new technologies while remaining knowledgeable on legacy proven technology.. Proven track record of creating and implementing successful front and back end web applications. Looking to bring my skills to a tech company with global reach.

WORK EXPERIENCE

Software Engineer at Universal Group, Doral, FL

March 2017 — Current

- - Utilized Agile Scrum Methodologies to bring efficient cooperation with the team and bring value faster to the client.
- - Implemented React into the company's existing website to update the tech stack from vanilla JavaScript.
- - Developed an application form and dashboard using React and Material-UI for the company to be able to receive and view online orders.
- - Implemented Escrow search page utilizing filtering through MongoDB aggregation to display relevant and desired escrows to specific users.
- - Created middleware to capture API exceptions and provided ability for admins to view recorded exceptions.
- - The application form and dashboard enabled the company to increase overall workflow.
- - Employed an agile development process with daily stand-ups and Trello for task management.

Recent Projects:

Exclusive Picks (Fullstack Web App (MERN)) – App where an authenticated user can filter baseball and basketball games depending on their numerology profile and filter based on the teams with the best probability of winning. Built with React using Vite. Site using React Redux to manage state. API connected using Axios via a provider on Rapid API. Authentication done via JWT through the server. User can register, login, and logout. Once logged in, they have access to full functionality.

Smart Goals (Fullstack Web App (MERN)) – Goal tracker app where a user can set and track goals. Built with React. Coded with MERN stack with full CRUD functionality. Authentication done via JWT through the server. User can register, login, create goals and then load saved goals from the database. When a goal is completed, a user can then delete that particular goal.

Crypto Arb Finder (Fullstack Web App (MERN)) – App where users can scan for unique arbitrage opportunities in the crypto options market. No tool like this exists on the web making it a unique app. If an arbitrage is found, details of it will be listed in the table on the site.

EDUCATION

WTAM Canyon, TX

2016 - 2017

MBA - Healthcare Admin

Authentication done via JWT through the server. Built with React, Node, Express.

Authentication done with JWT through the server.

Enlightened Picks (Fullstack Web App) – Custom website where owner filters sports odds based on a specific criteria and can then send the filtered picks to subscribers. Integrated sports Odds API fed into AG Grid where the owner performs CRUD operations. Payment integration with Paypal. Authentication and RBAC controlled via Auth0.

Medical Appt Tracker (Fullstack Web App (MERN)) – Medical appt tracking app built with MERN stack as part of a collaboration with 100 devs. Users can login and create medical appts and perform CRUD functionality as required. Currently in-progress.
